Summary

Results-driven Python/Django Developer with 4+ years of experience designing and scaling backend systems, REST APIs, and microservices for fintech payment and lending platforms. Proven expertise in Django, Django REST Framework, and FastAPI, with a strong track record automating financial workflows, optimizing database performance, and building high-volume distributed systems on AWS.

Work Experience

Proffin, New Delhi

April 2022 - Present

Software Engineer II

- Designed and built an **end-to-end in-house OCR + LLM invoice-extraction pipeline** with job-state management, retry/backoff, structured extraction, and IRN/e-invoice compliance parsing **increasing extraction success from 35% to 85%+** and reducing manual intervention.
- Architected and developed a **Pre-Approval Loan Eligibility system** aggregating ERP data, manual ledgers, sales history, CIBIL, GSTIN, and other financial parameters into a consolidated, **data-driven credit assessment and lending decision** workflow.
- Led **PostgreSQL performance optimization** across high-volume workflows by eliminating repeated database lookups, consolidating invoice-status aggregation, and introducing **concurrent index migrations** to improve query efficiency and production reliability.
- Architected **cross-system financial workflows** spanning LMS, LOS, ERP, UMS, LedgerParser, and ElapDB, improving data consistency across invoice, lending, approval, and financial-processing lifecycles.
- Implemented **TOTP-based privileged-admin authentication across 7 Django services**, including encrypted secrets, recovery codes, lockout controls, and automated authentication-flow testing.
- Improved **financial correctness** across vendor-finance/co-lender interest posting, sanction-limit aggregation, and fee calculations using **precise decimal arithmetic**.
- Developed **backend workflows and REST APIs** using Python, Django, DRF, Celery, and PostgreSQL for lending and financial operations across LMS, LOS, and internal platforms.
- Developed **portfolio analytics APIs** covering distributor performance, portfolio growth, management summaries, company drill-downs, and industry/brand productivity, including **AUM, utilization, and delinquency metrics**.
- Built and integrated **lender-specific client and supplier onboarding workflows** with data mapping, **PGP-encrypted SFTP** exchange, and success/failure response reconciliation.
- Built **Aadhaar document-masking** for PDF, JPEG, and PNG documents using PDF redaction with **OCR fallback**, exposed through authenticated APIs with **concurrent background processing**.
- Performed **fraud analytics and data analysis** to identify suspicious borrower relationships and repeat applications, developing a **deduplication framework** using Business PAN, CIBIL history, and historical relationships with the organization.
- Applied **data science, statistical analysis, and business-rule modeling** to identify risk patterns, assess borrower creditworthiness, and improve **fraud detection and underwriting accuracy**.

Education

Glocal University

2017 - 2019

Master's in Business Administration - Business Analytics

Relevant Data Courses: Business Intelligence and Data Visualization, Big Data Management and Analytics, Marketing Analytics and Consumer Insights, Financial Analytics and Risk Management, Strategic Business Analytics.

Skills

Languages: Python, Go, SQL

Frameworks/Libraries: Django, Django REST Framework (DRF), FastAPI, Celery

Databases & Caching: PostgreSQL, MySQL, Redis

Cloud & DevOps: AWS (EC2, S3), Docker, CI/CD

AI & Automation: OCR, LLMs, OpenAI API, Async Processing

Engineering: Microservices, Distributed Systems, System Design, REST API Design, Database Optimization

Tools: Git, Jira, Postman
